

AMBER 8 TUTORIAL

DNA
polyA–polyT Decamer

By: Ross Walker

Dept. Molecular Biology,
The Scripps Research Institute,
La Jolla, Ca, 92037, USA

(Based on the original DNA tutorial by Thomas Cheatham)

CONTENTS
1) <u>Introduction</u>
2) <u>Setting up duplex DNA: polyA–polyT</u>
2.1) <u>Generating the coordinates of the model structure</u>
2.1.1) <u>Creating our DNA duplex using nucgen</u>
2.1.2) <u>Loading the structure into Leap</u>
2.1.3) <u>Alternative ways to view the structures</u>
2.2) <u>What level of simulation am I going to attempt?</u>
2.2.1) <u>The types of simulations to be run in this tutorial</u>
2.3) <u>Building the prmtop and inpcrd files</u>
2.3.1) <u>LEaP</u>
3) <u>Running Minimisation and Molecular Dynamics (in vacuo)</u>
3.1) <u>Relax the system prior to MD</u>
3.1.1) <u>Building the mdin input file</u>
3.1.2) <u>Running sander for the first time</u>
3.1.3) <u>Creating PDB files from the AMBER coordinate files</u>
3.2) <u>Running MD in–vacuo</u>
3.3) <u>Analysing the results</u>
3.3.1) <u>Extracting the energies, etc. from the mdout file</u>
3.3.2) <u>Calculating the RMSd vs. time</u>
3.3.3) <u>Visualising the Trajectories with VMD</u>

4) <u>Running Minimisation and Molecular Dynamics (in implicit solvent)</u>
4.1) <u>Relax the system prior to MD</u> 4.2) <u>Running MD with generalise Born solvation</u>
5) <u>Running Minimisation and Molecular Dynamics (in explicit solvent)</u>
5.1) <u>Equilibrating and running MD solvated poly(A)–poly(T)</u>
5.1.1) <u>A brief introduction to periodic boundaries</u> 5.1.2) <u>Choosing a suitable cut off</u> 5.1.3) <u>Minimisation Stage 1 – Holding the solute fixed</u> 5.1.4) <u>Minimisation Stage 2 – Minimising the entire system</u> 5.1.5) <u>Molecular Dynamics (heating) with restraints on the solute</u> 5.1.6) <u>Running MD Equilibration on the whole system</u>
5.2) <u>Analysing the results to test the equilibration</u>
5.2.1) <u>Analysing the output files</u> 5.2.2) <u>Analysing the trajectory files</u> 5.2.3) <u>Viewing the trajectory</u> 5.2.4) <u>Re–imaging the trajectory back into the primary box</u>
5.3) <u>Summary</u>
6) <u>A Practical Example (A–DNA)</u>
6.1) <u>Creating the starting structure</u> 6.2) <u>Creating the sander input files</u> 6.3) <u>Minimising the system</u> 6.4) <u>Running initial equilibration</u> 6.5) <u>Running further equilibration and production MD</u> 6.6) <u>Analysing the results</u>
<u>File Summary (Links to all files referenced)</u>
